Towel Warmer Installation Procedure

① Rough-in Requirements - for constant circulation heating system (see figure 1)

Using this installation method, the towel warmer is controlled using the valves attached to the towel warmer, and can be operated independently from the heating system. This method of installation is popular where there are multiple heating appliances connected to a closed hot water heating system, and electronic control of the individual towel warmer is not important.

1. Install heating system pipework to proposed towel warmer location and tee off the main circuit to provide a branch circuit for the towel warmer. Piping to towel warmer valves should be 1/2" copper.
2. If towel warmer supply pipes are coming through wall, rough-in pipes as per locations shown on fig 4. If towel warmer supply pipes are coming through floor, rough-in pipes as per locations shown on fig 7.
3. If a hydronic installation pack is being used (see figs 5 & 8), these should be connected (solder connected) within the wall / floor. If a hydronic installation pack is not being used (see figs 6 & 9), these 1/2" copper supply lines should protrude through wall/floor in order to connect to towel warmer valves.
4. Wall studs or plywood backing is required in the wall at bracket locations. See figure 4 for bracket locations.

fig. 1

Towel Warmer Installation Procedure

① Rough-in Requirements - for dedicated heating system (see figure 2)

Using this installation method, the towel warmer is controlled using the thermostat wired to the circulator pump, and cannot be operated independently from the heating system. This method of installation is popular where there is only one heating appliance connected to a closed hot water heating system, and electronic control of the individual towel warmer is required.

1. Install heating system pipework to proposed towel warmer location. Piping to towel warmer valves should be 1/2" copper.
2. If towel warmer supply pipes are coming through wall, rough-in pipes as per locations shown on fig 4. If towel warmer supply pipes are coming through floor, rough-in pipes as per locations shown on fig 7.
3. If a hydronic installation pack is being used (see figs 5 & 8), these should be connected (solder connected) within the wall / floor. If a hydronic installation pack is not being used (see figs 6 & 9), these 1/2" copper supply lines should protrude through wall/floor in order to connect to towel warmer valves.
4. Wall studs or plywood backing is required in the wall at bracket locations. See figure 4 for bracket locations.

Towel Warmer Installation Procedure

2 Installation Instructions (see figure 3)

1. Check all items have been received. You should have Towel Warmer and mounting discs including fixings. Read all instructions before continuing.
2. Fix mounting discs "A" using the screws provided and in locations as shown on figure 2.
3. Mount towel warmer and slide brackets "B" over mounting discs "A".
4. Fasten Towel Warmer using set screws "C" to lock mounting discs "A" into brackets "B". Ensure the Towel Warmer is firmly and safely fixed.

fig. 3

3 Valve Connection (see figure 5, 6, 8 or 9)

1. If using a hydronic installation pack, slide escutcheon (supplied with hydronic installation pack) over 1/2" supply pipe.
2. Unscrew male threaded components including collars from valve and thread into female inlets towards the bottom of towel warmer leg using a 12mm allen key wrench.
3. Push compression fitting on to 1/2" supply pipe and tighten 1/2" compression fitting collar on valve.
4. Seat male threaded component (now connected to towel warmer) on valve and tighten collar.
5. Insert/tighten air vent plug found at the location as shown in fig 4.
6. Check for leaks and bleed system if necessary using air vent plug.

Warning: All hydronic plumbing connections should be made in accordance with local and national plumbing regulations. It is the responsibility of the plumber to ensure plumbing system and towel warmer installation comply with these regulations.

Specifications & Drawings (wall rough-in)

Model #	Description	Finish	Weight (lb)	Output	WxHxD (mm)	WxHxD (Inches)	Metal Type
H6083	Isis Hydronic	Chrome	15.8	2512Btu	600 x 875 x 130	23.5" x 34.5" x 5"	Mild Steel
H6084	Isis Hydronic	Brushed Nickel	15.8	2521Btu	600 x 875 x 130	23.5" x 34.5" x 5"	Mild Steel
H6086	Isis Hydronic	Polished Nickel	15.8	2512Btu	600 x 875 x 130	23.5" x 34.5" x 5"	Mild Steel

A1064	Traditional Gate Valve	Brushed Nickel	2.7	-	-	-	Mild Steel
A1066	Traditional Gate Valve	Polished Nickel	2.7	-	-	-	Mild Steel
A3013	8" Installation Pack	Chrome	0.4	-	-	-	Copper
A3014	8" Installation Pack	Brushed Nickel	0.4	-	-	-	Copper
A3016	8" Installation Pack	Polished Nickel	0.4	-	-	-	Copper

Material Specifications: Brass Tube Diameter 1.25" x 0.03" (31.8mm x 1mm) tested to 11 bar

Warranty: 5 years

Fixings: Screws and fixings are included

Hydronic System: Hydronic towel warmer should be used only on a closed system incorporating an anti-rust inhibitor.

Care & Maintenance: A periodic wash using warm water and a soft cloth will retain the high quality finish of your towel warmer for many years to come. ON NO ACCOUNT should any household bleaches, detergents, abrasive polishes, steel wool or other cleaning agents be used on this item.

IMPORTANT: Circuit temperature must not exceed 158° Fahrenheit.
