Preparation

1. Prior to installation, examine all boxes and packages for shipping damage and compare the piece count with your packing slip. After opening all boxes and packages, read this introduction carefully. Check that all of the needed parts are included in the package by checking off the components on the “Detailed Diagram of Shower Door Components”. If the unit has been damaged, has a finishing defect, or has missing parts, please contact our customer support department within 3 business days of the delivery date. Please note that DreamLine® will not replace any damaged products or missing parts free of charge after 3 business days or if the product has been installed. Feel free to contact DreamLine® if you have any questions, and please provide an order number, job name or other proof of purchase to help us identify your original order.

2. If this unit is going to be installed in a new construction, please, install all of the required plumbing and drainage before installing the shower. Use a competent and licensed (if required by local code) plumber for all plumbing installation.

3. Please note that you should consult your local building codes with questions about installation compliance standards. Building and plumbing codes may vary by location, and DreamLine® is not responsible for code compliance standards for your project and will not accept any returns.

4. Please make sure that prior to beginning the installation, the surfaces are leveled and solid and will be able to support the total weight of the unit. Also make sure the walls are at right angles. Irregular installation surface level, radius corners or improper angle of side walls will result in serious problems for your installation. Please, note that some adjustments and drilling may be necessary during the installation process.

5. This unit has to be installed against a finished floor and walls.

6. This model requires a minimum 1” of flat threshold space for installation.

7. This model has 1/2” of adjustment for out-of-plumb wall conditions within the wall profiles.

This enclosure is available with clear glass as the “Cornerview”, or with patterned glass as the “French Corner”. The clear glass “Cornerview” model will be used as an example throughout this manual.
Tools Required

- Caulk
- Tape Measure
- Pencil
- Phillips Screwdriver
- Drill bit (Ø=5/16")
- Drill bit (Ø=1/8")
- Level
- Caulk Gun
- Electric Drill
- Hammer
- Knife

**NOTE:** Unpack your unit carefully and inspect it. Identify all parts using the detailed diagram and packing list in this manual as a reference. Before discarding the carton, check for small hardware bags that may have fallen to the bottom of the box. If any parts are damaged or missing, please contact DreamLine® for replacement. The shipping boxes may contain extra parts not used in your model configuration.

**NOTE:** Retain these installation instructions for future reference.
Shower Enclosure Installation

NOTE:
The shower enclosure has to be installed against finished walls and installed upon a shower base or threshold.

1. Draw a line on the wall according to your Shower Enclosure model size of 34-1/2” as measured from the finished corner to the outside edge of the Wall profiles (01). Place the Wall profiles (01) onto the Shower base or threshold against the finished wall and level them vertically.

See Fig. 1 for details.

2. Mark the drilling holes on the wall through the predrilled holes in the Wall profile (01) and drill the holes in the wall using a Ø 5/16” drill bit and then insert the Wall anchors (09).
Run a bead of silicone along the holes and around the holes on the wall.
Attach the Wall profile to the wall using the Truss head screw ST4.2×30 (05).

See Fig. 2 for details.
3. Insert the **Rail connector (04)** into the guide rails of the **Stationary glass assembly (02)**. Drill a hole into the outer layer of the **Rail connector (04)**, through the predrilled hole in the guide rails using an **Ø1/8”** drill bit. Fasten the top and bottom **Rail connectors (04)** to the guide rails with the **Flat head screw ST4.2×10 screws (06)**.

See Fig. 3 and Fig. 4 for details.

**NOTE:**

To prevent damaging the Rail connector (04), do not overtighten the screws.
4. Carefully align the assembled **Stationary glass panels (02)** onto the Shower base and insert the glass profile edges into the **Wall profiles (01)**.

See Fig. 5 for details.

5. Insert two **Door wheels (11)** into the groove of the upper guide rail, then attach the **Glass door (03)** to the **Wheels (11)** and fasten them together with the **Bolts M5×8 (10)**. (Note that the magnetic edges of both doors will meet in the corner).

See Fig. 6 and Fig. 7 for details.

Use the same procedure to attach the bottom guide rail and **Wheels (11)**. Repeat this process to install the other door panel.
6. If necessary, adjust the **Glass doors (03)** for smooth operation using the slot in the rail. Do any final adjustments of the assembled unit within the **Wall profiles (01)** and make certain that the bottom rail is tight to the threshold.

From inside the shower, drill holes into the first layer of the **Wall Profile** and the **Glass profile** (Fig 8.2) using an **Ø1/8”** drill bit.

**ATTENTION:**
Do not drill the profile throughout, only through the first layer of the wall profile.

Secure the **Glass profile** to the **Wall profile** using the **Round head screws ST4.2×10 (07)** and washers.

Cover the exposed screw heads with the **Decorative covers (08)**.

See Fig. 8 for details.
7. Use a good quality mildew-resistant silicone to seal all the connections between the wall profiles and the wall, bottom guide rail and the shower base. **Let the silicone cure for at least 24 hours before using the shower.**

See fig. 9 for details.
**Product Maintenance**

**BASES and BACKWALLS:** To ensure long lasting life for your acrylic back walls: wipe them off after each use with a soft cloth. To clean the acrylic back walls use non-abrasive sprays or cream based cleaners. Never use abrasive cleansers, metal brushes or scrapers that could scratch or dull the surface.

**GLASS:** To ensure long lasting life for your glass shower products: wipe them off after each use with a soft cloth. Rinse and wipe off the glass using either a soft cloth or a squeegee to prevent soap buildup and water spots. To prevent scratching the surface: never use abrasive cleaners and cleaning products that contain scouring agents. Never use bristle brushes or abrasive sponges.

**HARDWARE:** To ensure a long lasting finish: wipe off the metal parts after each use with a soft cloth. Do not use abrasive cleaners or cleaning products containing ammonia, bleach or acid. If accidentally used, rinse the surface as soon as possible to prevent finish peeling or corrosion. After cleaning the polished finishes, rinse thoroughly and wipe dry with soft cloth. Never use an abrasive sponge or cloth, steel wool or wired brushes as these may permanently scratch the surface.
